

Bodega

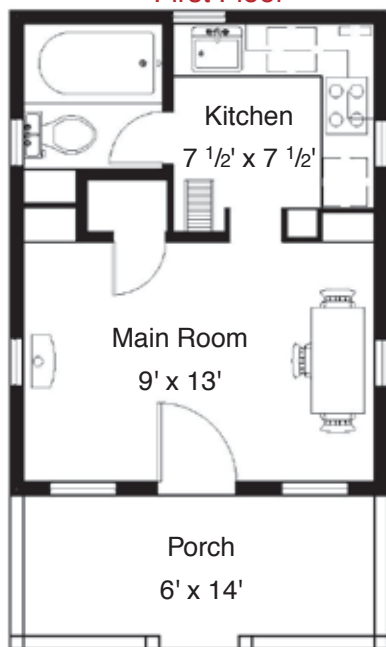

The **Bodega**, and all the small houses that follow it, make great auxiliary dwellings. There is a full bath and a kitchen, and even a washer/dryer unit below the counter.

I don't count the loft as square footage because with so much sloped ceiling, it doesn't officially count as a habitable room. That said, with seven feet of ceiling height over more than 70 square feet, this heated loft provides plenty of usable space.

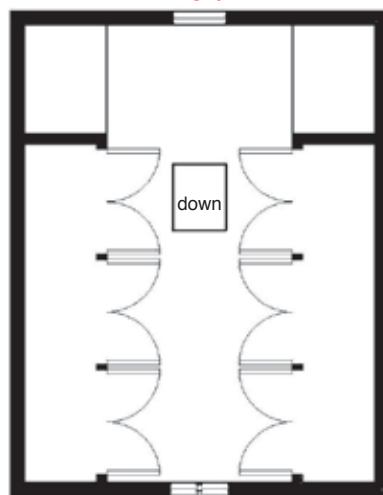

If you'd like more, you can opt for the downstairs bedroom addition pictured below.

We do not build this house, however you may purchase the plans (\$695) to build it.
